

Hello everyone!
I am Prajna Parsnip.

I love to grow underground,
where I collect all the good
nutrients from the soil.

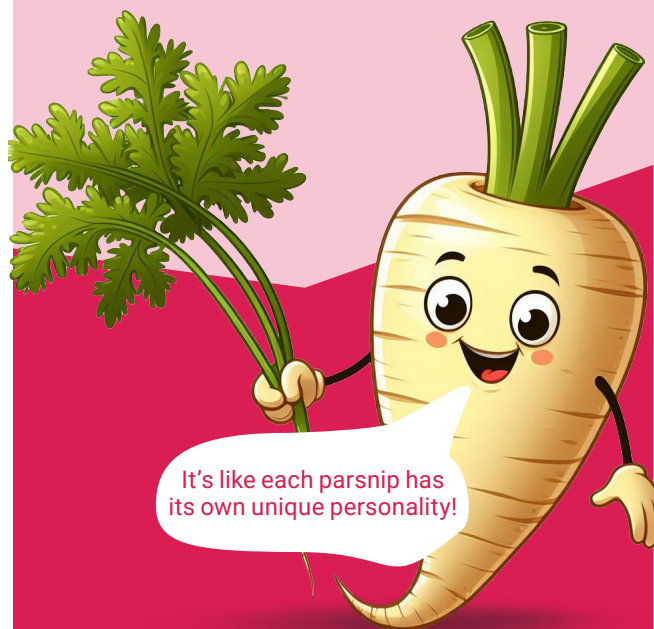

I am a root vegetable
and am related to my
cousin Carla Carrot.

Parsnips grow the same
way as carrots, but we're bigger
and whiter. Cool, right?

PARSNIPS

Sometimes we can be sweeter if we're
grown in a cooler climate, but we can
also be spicier if we're allowed to grow
in a warmer climate.

It's like each parsnip has
its own unique personality!

Parsnips are not only delicious to eat,
they have also been used for other
purposes throughout history.

PARSNIPS

For example, in ancient times,
they were used by both the
Greeks and Romans to make
medicine...

...and also as a kind of
sweetener before sugar
became common.
