

Hi! I am
Pekka Pärön.

DID YOU KNOW THAT PEARS ARE ACTUALLY RELATED TO APPLES?

You may have met my cousin Angel Apple? Just like apples, we grow on trees and can be found in orchards and gardens around the world.

ANGEL APPLE

PEAR

When spring comes, our trees bloom with beautiful white flowers. After our trees have bloomed and been pollinated by bees and other insects, little pears begin to grow.

During the summer we grow little by little and when autumn comes we are ready to be picked and put in your stomach!

TASTING PEAR

When you eat a pear, what do you think it tastes like?

Maybe it's juicy and sweet, or maybe it's a little crunchy and sour?

There are many different varieties of pears with different flavors and textures. Each pear is unique.
